Technical Data Sheet

410 Microlight Filler

410 Microlight[™] is the ideal low-density filler for creating a light, easily-worked fairing compound especially suited for fairing large areas. Microlight mixes with greater ease than 407 Low-Density filler or microballoons and is approximately 30% easier to sand. It feathers to a fine edge and is also more economical for large fairing jobs. Not recommended under dark paint or other surfaces subject to high temperatures. Cures to a tan color.

When West System® epoxy is thickened to a peanut butter consistency with Microlight[™], the cured product sands and carves like basswood.

Filler Buying Guide:

	Package size	Quantity of mixed epoxy required for				
Filler		catsup	mayonnaise consistency	peanut butter consistency		
410-2 410-7 410-B	1.7 oz 5.0 oz 4.0 lb	1.2 qt 3.0 qt 8.9 gal.	0.9 qt 2.4 qt 7.2 gal	0.7 qt 1.8 qt 5.6 gal		

Initial volume of epoxy X = 2.6 = Volume of fairing compound.

Typical Properties in Cured Epoxy:
